Continuation of 11. does NOT place the application in condition for allowance because: In response to applicant's argument that the references fail to show an access condition determination part for determining said access condition on the basis of the information acquired by said card information acquisition part, information on access performance of said semiconductor memory card and information stored in said card use condition storage part and a file system control part for acquiring said access condition determined by said access condition determination part and performing file access suitable for said access condition, attention is drawn to Col. 5, lines 22-67 & Col. 6, lines 25-40 of Hayashi. Hayashi discloses that when the memory is connected to the access device, the access device acquires and analyzes the memory card attributes and access conditions stored in the supervisory area and accesses the memory card based on the acquired information, which would therefore necessitate the access device to have a file system control part and an access condition determination part in the access device since the access device performs their functions
